“Advanced” Bathtub Cleaning Instructions

FOR TUBS THAT ARE DIRTY, BLACK OR HAVE SPOTS THAT CAN'T BE
CLEANED WITH DAILY CLEANING INSTRUCTIONS

(Important to follow steps in order and only proceed if step did not work)

Step I:

Use one of the following with a washcloth for tough build up or spots:

- Ecolab Lemon-Eze
- Proctor & Gamble Comet Crème Disinfectant
- Johnson Diversey Sunlight Crème Cleanser

Step II:

Use Lemon-Eze or other product noted above with the soft nylon brush. The brush we recommend can be purchased on our website at www.innovativetubsolutions.com for \$6.99 + shipping. Agitate the surface of the non skid using the nylon brush in a circular motion to free embedded dirt. Rinse thoroughly.

Step III:

Using Bar Keepers Friend or Soft Scrub with the soft bristle nylon brush:

1. Run warm water over non skid
2. Apply cleanser to non skid area
3. Clean with circular motions using soft pressure
4. Let cleanser sit on non skid for a minute or two
5. Rinse thoroughly with clean water

Step IV: If steps I through III are not effective, call Innovative Tub Solutions for further instructions: 855-874-2558.

NOTE: These instructions are to be used for sparingly for occasional clean up of embedded dirt. If they are used more frequently, you will shorten the life of your non skid and quite possibly void your warranty.
